INTRODUCTION

Needed remedies:

- Screwdrivers
- Brush
- Oil

TOOLS:

- [Phillips #0 Screwdriver](#) (1)
 - [Detailing Brush](#) (1)
 - [Lubricant](#) (1)
-

Step 1 — Disassembly

- Remove battery
- Turn Netbook upside down
- Unscrew all screws from the back of the pc
- Remove the back plate
- Unscrew metal cover on top of fan

Step 2 — Removing the fan

- Gently lift the fan making sure not to drop dust into the motor of the fan below
- Clean fan blades
- Clean the fan house
- place the fan upside down so the metal pin points upwards

Step 3

- Apply oil
 - Apply one or two droplets of oil onto the metal pin
- Place it on the motor and make sure it rotates without problems
- In case there is still sounds coming from the fan when turned on, redo the cleaning and lubrication.

Step 4

- Assemble everything and test

To reassemble your device, follow these instructions in reverse order.
